

**Christopher Glycer is the Chief Security Architect at FireEye** with over ten years of experience in computer forensics and information security. Mr. Glycer works with FireEye's executive leadership and product management teams to help define the strategy and roadmap for FireEye's product offerings, set development priorities, and assess competitive positioning. His team supports FireEye engineering with digital forensics and incident response subject matter expertise throughout the planning, design, and development life-cycle. Mr. Glycer provides subject matter expertise to the FireEye Innovation and Custom Engineering teams to help drive new research and development that will turn into major product features.
