CoSo Cloud: Company Profile

History:

Founded in 2007 by two former Adobe employees, CoSo Cloud provides a wide range of solutions and services for organizations to achieve their virtual learning goals. As a trusted and strategic Adobe Gold partner for over a decade, Adobe and many of its customers rely on CoSo Cloud to "complete the solution" for each customer's individual and unique use cases.

Mission:

Leading web conferencing systems and learning management software lack the necessary security or enterprise features for high-consequence virtual meetings and training. CoSo complements our customer's investments in Adobe Connect and Adobe Learning Manager by adding missing capabilities such as authorized Security certifications, Regulatory Compliance reporting, High-Availability/Reliability options, and Personalization-of-Brand for specific use cases. We build an engaging virtual experience for our customers, so they can "complete their solution" to safely and effectively conduct high-consequence virtual meetings and drive critical eLearning programs without the risks of sharing sensitive data in the cloud or experiencing a loss of productivity from using standard cloud offerings

**CoSo Cloud completes the solution for secure learning management and virtual classroom delivery.**

Companies often rely on various training management solutions to ensure their employees receive the necessary knowledge and skills to perform their jobs effectively. However, integrating these solutions into a cohesive system can be challenging and time-consuming, especially for organizations with complex training needs or multiple locations.

This is where a CoSo Cloud comes in - a specialist who can help companies streamline their training management systems and ensure they work seamlessly together. A systems integrator can assess the company's needs, identify gaps in the current training system, and design and implement a custom solution that meets those needs. By partnering with a systems integrator, companies can reduce the risk of errors, save time and resources, and achieve their training objectives more efficiently.
