

Demetrius Davis is a recognized thought leader in enterprise information and communications technology (ICT) modernization efforts, with a focus on trusted telecommunications and emerging technology strategy, cyber and supply chain security. Mr. Davis is currently serving as a Principal Systems Engineer at the MITRE Corporation, the Acquisition and Sustainment Team Lead for the DoD 5G Cross-Functional Team, and co-lead for the ATIS/MITRE 5G Secure Profile Working Group. His primary roles include representing civilian and defense agency equities in standards bodies and public-private forums (Federal Mobility Group, ATARC), collaborating with telecom industry partners, and engineering solutions to digital modernization challenges. Mr. Davis is also a PhD candidate in Computer Science at Virginia Tech with a research interest in multi-carrier network access.
