

Craig Heartwell, Chief Technology Officer, Presidio Federal

Craig is an experienced technologist, leader and entrepreneur having grown vision driven teams and companies through the application of leading-edge technologies. His ability to assimilate and synthesize domain knowledge while applying technical expertise and solutions become even more compelling for federal government agencies given his insights into alternative approaches, business opportunities, and emerging markets. As a senior solutions architect at IBM he focused on competitive solutions, delivery models and pricing strategies for federal government contracts. While at Perthera, Craig worked with world-class oncologists and medical researchers to help advance the fight against cancer. Other career highlights include coauthoring four awarded patents in healthcare IT, designing the award-winning interface for ObjectVideo's VEW application and architecting an interactive, high fidelity simulation system that supported a globally distributed proof-of-concept war game for DARPA.
