

Luis E. Velazquez is the Chief Technology Officer (CTO) for Marine Corps Systems Command. CTO duties include Modeling and Simulation capabilities that effectively and efficiently supports the full spectrum of Command activities and operations. Provide the authoritative tools and expertise for the Marine Corps Systems Command and PEO Land Systems in the application of models, simulations, and model-based engineering to support systems and systems of systems lifecycle acquisition. Engagement with military, industry, academia, joint, and coalition mission partners to shape the Command's science and technology investments to embrace options that counter (and create) strategic surprise. Reduce the cost, acquisition time and risk of our acquisition programs. Fully exploit M&S capabilities to make systems and equipment more affordable and capable, while ensuring timely capability delivery.
