

Michael Epley, Chief Architect and Security Strategist, Red Hat North America Public Sector

Michael Epley has been helping the US defense and National Security communities use and adopt open source software over the last 2 decades with practical experience as a software developer and enterprise architect. During his tenure at Red Hat, Michael has passionately driven adoption of key technology: cloud and kubernetes, tactical edge/forward deployed systems, data analytics tools and platforms, and disconnected operations -- always in the context of security and compliance concerns unique to this sector. Michael has BS degrees in Mathematics and Mechanical Engineering from Virginia Tech and a JD from The University of Texas School of Law.
