

Adilson Jardim – Area Vice President, Public Sector Sales Engineering

Adilson Jardim has over 20 years of experience in the Information Technology space. Starting his career as a software and applications developer, he developed satellite and telecommunications software, financial applications, fleet management applications and even a numismatic grading application that was leveraged to preserve and rate coins from the marine recovery of the SS Republic.

For more than a decade, Mr. Jardim has worked with US Government agencies to architect and provide technology solutions that serve to solve operational and mission related needs, combining his knowledge of Federal Enterprise Architecture requirements with mission requirements.

Adilson Jardim is currently the Area Vice President for Public Sector Sales Engineering at Splunk, Inc. There he leads a large team of systems engineers, experts in Splunk and other technologies, dedicated to providing our Public Sector customers solutions that transform big data challenges and provide solutions for Security, IT Operations, Analytics and the emerging Internet-of-Things.

What is Splunk?

Splunk is an innovative data platform that was invented to make machine data usable, accessible and valuable to everyone. In a world of emerging technologies, wearables and devices, machine data has taken a front row seat in the Big Data space.
