Chris Hallenbeck is a Director with Tanium's Endpoint Detection and Response (EDR) Team. Previously, Chris worked for almost 7 years at the U.S. Computer Emergency Readiness Team (US-CERT), which is a part of the Department of Homeland Security. At US-CERT, he was responsible for having designed and built their incident response capabilities while restructuring their current focus on strategic mitigation guidance. Over countless IR engagements both with government and private sector critical infrastructure victims, he has seen a common theme: a lack of emphasis on IT operations and IT security fundamentals. Prior to joining US-CERT, Mr. Hallenbeck worked for RSA Security and EMC as a security engineer and with AOL/Time Warner on their global incident response team. He started his career as a Unix sysadmin at Binghamton University. When not chasing electrons, Mr. Hallenbeck much prefers to be someplace tropical 50-100 feet under the water.
