Jose F. Bravo

For the last 18 years I have worked as a subject matter expert in IBM Security and joined the North America Top Security Team last year, as an Architect. My mission is to show customers "The Art of the Possible" with our technology and its integration with other tools. My style is leading with whiteboard and live demonstration (no power no point). I also have posted more than more than five hundred short YouTube videos (jbravovideos is the name of the channel) with more than half a million views more than three thousand subscribers, on QRadar and other components of the IBM Security portfolio. In research, my main area of expertise is strong authentication where I have two patents granted and six others filed (Second Plateau). Being with the Company for 30 years and before that, I worked in the areas of design and field-testing of digital hardware, and later in software development for telecommunication equipment in Venezuela.

I got a BS in Electronic Engineering from Simon Bolivar University (Caracas, Venezuela) where I work as a part-time professor before joining IBM. I have a Master of Science in Computer and Systems Engineering from RPI (Rensselaer Polytechnic Institute, Troy New York).
