

## **Mark Przybocki, Acting Chief, Information Access Division, NIST**

**Mark Przybocki** is the acting chief of the [Information Access Division](#) (IAD), one of seven technical divisions in ITL. In this capacity, he leads NIST collaborations with industry, academia, and other government agencies to foster trust in emerging technologies that make sense of complex (human) information, by developing improvements to the measurement science, managing technical evaluations, and contributing to standards. The IAD is home to the high profile [Text Retrieval Conference](#) (TREC), several biometric benchmarking programs, and a growing number of technical evaluations for emerging human language, natural language processing, and speech, image, and video analytics technologies. Mr. Przybocki's current interests are in AI benchmarking, explainable AI, and bias across the AI development lifecycle.
