With a strategic focus on datacenter infrastructure solutions, Matt Kimler has worked with customers and business teams to develop strategy and solutions across on-premise, public cloud, hybrid cloud and multi-cloud environments. Leveraging my own experience in the IT field for over 20 years as an IT engineer, project manager and solutions architect, he has build IT infrastructure solutions using hardware and software technologies that will meet each customer's unique requirements. His current focus areas are hyper-converged infrastructure, virtualization, automation/orchestration, VDI, AI and ML leveraging the NVIDIA DGX platform, cloud offerings from AWS and GCP, and Red Hat solutions such as Ansible Tower and OpenShift.
