

# RSA PROVIDES MISSION-CRITICAL CYBERSECURITY CAPABILITIES ACROSS THE PUBLIC SECTOR

Every day, RSA serves the mission of government and national defense, helping solve complex and sensitive security challenges, including:

- Defending against advanced threats
- Managing organizational risk
- Safeguarding access and collaboration

Across the halls of government, mission readiness at government agencies has been degraded by cybersecurity threats, impacting operational continuity, IT systems and data repositories, and organizational reputation. Despite all efforts, it has been difficult to put security details into terms of mission impact fast enough. Until now. RSA provides the answer.

## MISSION-DRIVEN SECURITY

RSA enables the mission of the public sector through a proven architecture that connects insights with operational context. We deliver market-leading products for threat detection and response with full network visibility, identity assurance, and integrated risk management capabilities.

## A NEW SECURITY PARADIGM

Advanced cyber attacks and intrusions are almost impossible to reliably prevent, given the openness of today's networks, the expanded attack surface, and the growing sophistication of advanced, polymorphic threats. However, RSA research indicates that 80% of security staff, budgets, activity, and tools are focused on securing the perimeter. This security posture can expose an agency to mission-impacting consequences when a breach inevitably occurs.

RSA helps the public sector deploy an IT security model that more evenly applies agency resources across prevention, monitoring, and response. This new security posture minimizes the dwell time that malicious actors or new threats have within the IT environment. RSA's approach helps ensure that intrusion and compromise do not result in ruinous operational consequences and mission disruption.

*RSA mission-driven security solutions help customers comprehensively and rapidly link security incidents with mission context to respond effectively and protect what matters most.*

## THREAT DETECTION AND RESPONSE

Security operations centers (SOCs) need collaborative, crossdisciplinary teams with highly specialized skill sets to combat advanced cyber threats.

- RSA NetWitness® Logs and Network is designed to provide security organizations with the pervasive visibility and advanced analytics needed to deal with their most pressing security issues.
- RSA NetWitness Endpoint is an enterprise threat-detection and response solution designed to monitor and protect IT environments from undesirable software and the most elusive malware.

## INTEGRATED RISK MANAGEMENT

The RSA Archer® IRM suite provides you with clear visibility into all of the risks that your organization needs to manage. RSA Archer ensures that your compliance posture and security posture are optimally managed. Further, RSA Archer helps you manage risk and compliance use cases across the agency. Get a holistic view across the organization with rolled-up, actionable reporting that brings role-specific, actionable risk data together for executive leaders.

## IDENTITY AND ACCESS MANAGEMENT

The critically sensitive data, systems and devices that government employees use every day are under constant attack and are a uniquely high-profile target for unauthorized access. The RSA SecurID® Suite of identity solutions empowers your agency to:

- Know your users and how they interact with systems
- Leverage identity intel across your security program

## FRAUD PREVENTION

The RSA Fraud & Risk Intelligence Suite gives agencies transforming their digital, multichannel strategy the ability to both protect citizens against fraud and improve user experience by reducing transaction friction.

## ABOUT RSA

RSA® Business-Driven Security™ solutions provide organizations with a unified approach to managing digital risk that hinges on integrated visibility, automated insights and coordinated actions. With solutions for rapid detection and response, user access control, consumer fraud protection, and integrated risk management, RSA customers can thrive and continuously adapt to transformational change.
