

Douglas Steil has spent the past 18 years supporting IT and Cyber initiatives within the Federal, State, and Commercial sectors. He has held product management, portfolio management, business development, program management, and executive management roles for several small and large businesses in the National Capitol Region. For the past 10 years Doug has supported product lifecycle management, software development, systems engineering, research and development, and large scale data analytics programs for the DoD and Intelligence Community (IC). Engagements included Document and Media Exploitation (DOMEX), big data analytics, forensics, cyber security, intelligence analysis, and Multi-INT efforts. Doug is currently BAE's General Manager for their Cybersecurity Products Portfolio, which includes cross domain solutions, a secure general purpose operating system, and the secure information broker appliance (SIBA).
