

Tommy Walker is the Chief Field Technologist for End-User Computing at VMware and leads the Global Technical Pursuit team. He has over 25 years of experience working with customers on targeted solutions that meet and exceed their business and technology requirements. After graduating from the Citadel with a degree in Computer Science he went to work for several consulting firms grounding himself with Microsoft, Cisco, Citrix and other technology leaders before founding his own company “eGroup” a technology consulting company headquartered in South Carolina. He was recruited by Citrix and helped drive their expansion across healthcare and finance in the Southeast.

Tommy was an early adopter of virtualization which initiated his move to VMware where for the last 19 years he has been helping customers achieve tremendous results with virtualization, transforming to the cloud and expanding digital workspaces. His passion for end user experience precipitated his specialization into all things End User at VMware. He continues to instill his knowledge and experience across multiple customer segments providing strategies and architecting solutions that realize business value and are enabling customers to move forward with Digital Workspace Transformation and the AnyWhere WorkForce.
